

RONALD BODNAR

(714) 248-6510 | ron.bodnar@outlook.com | ronbodnar.com | github.com/ronbodnar | linkedin.com/in/ronbodnar

SUMMARY

Senior Full Stack Engineer specializing in ERP and operational systems. Led design and delivery of a production ERP platform managing \$20M+ in active contracts and automating 1,500+ daily transactions with full audit traceability.

SKILLS

Frameworks & Libraries: Spring Boot, Spring Security, Angular, React, Node.js, Express.js, Zustand, Tailwind CSS

Languages: Java, TypeScript, JavaScript, Python, SQL

Databases: MySQL, MongoDB

Cloud & DevOps: AWS (EC2, S3), CI/CD Pipelines, Docker, Docker Compose, GitHub Actions, Git, Nginx

Testing: JUnit, Vitest, Selenium

EXPERIENCE

Senior Full Stack Software Engineer | *Machorro & Sullivan (Contract)*

Feb 2024 – July 2026

- Architected, tested, and delivered an ERP platform (Java, Spring Boot, Angular, MySQL) managing 55K+ service contracts for 25 staff, owning the full SDLC from stakeholder requirements through production deployment
- Automated contract and payment workflows across ~1,500+ daily transactions, recovering 450+ staff hours/month and eliminating manual bottlenecks across finance and operations
- Designed and implemented a multi-stage ETL pipeline (Python, Selenium, Spring Boot) to migrate and validate 400K+ legacy records into MySQL, improving data accuracy by 20% while providing complete audit traceability
- Built and deployed a Node.js/Express microservice and REST API for generating PDF documents directly from ERP data, eliminating 90% of manual paperwork while ensuring consistent business records
- Developed reusable Angular/TypeScript UI components and optimized change detection with RxJS, reducing page load times by 40% while improving maintainability across the ERP platform
- Resolved database scalability bottlenecks by reducing reporting latency from 3+ seconds to <100ms; decomposed JPA queries and optimized paginated data access over 500K+ rows
- Containerized the system using Docker and deployed and managed CI/CD pipelines via GitHub Actions to AWS EC2, reducing deployment time from 20+ mins to under 5 mins
- Engineered a multi-tenant security layer using JWT with rotating refresh tokens, RBAC, and schema-level isolation to ensure data separation across client organizations

Professional Development | *Self-Directed*

Apr 2020 - Feb 2024

- Earned a Bachelor of Science in Computer Science while managing full-time employment outside of technology
- Built and deployed an Angular/Spring Boot application enabling drivers to submit daily trip logs digitally, automating paid/non-paid stop counting, saving 20+ hours of manual supervisor review bi-weekly and reducing payroll errors

Senior Full Stack Software Engineer | *Wheel & Tire Superstores*

Feb 2018 – Mar 2020

- Architected an inventory synchronization platform (Java, Spring Boot, MySQL) integrating multiple stock sources through APIs and scheduled jobs, reducing stock-outs 25% and recovering \$15K+/month in sales
- Led Git workflow adoption and mandatory code reviews for a 4-engineer team, and mentored an operations lead in Java development to maintain business continuity during workflow automation
- Migrated an e-commerce platform handling 100,000+ daily requests to AWS cloud services (EC2, S3), reducing infrastructure costs by \$5,000+ per year, while enhancing scalability and availability
- Solved inaccurate vehicle-part matching by building a fitment compatibility algorithm, reducing product returns 35%

Full Stack Software Engineer | *Rush Exotic Wheels*

Jun 2015 – Dec 2017

- Engineered a Java/Spring Boot fulfillment platform enabling multi-channel e-commerce expansion, including automated product listing generation and synchronization for 20K+ SKUs, directly supporting \$1.5M+ in annual revenue

Java Developer | *Wheel & Tire Superstores*

Jul 2013 – Jun 2015

- Built automation tools and data transformation pipelines that reduced manual operational workload by ~80%
- Reduced production bugs 75% by implementing JUnit test coverage and refactoring legacy Java/Spring codebase

PROJECTS

ng-modular-forms – *TypeScript, Angular, Angular Material, Tailwind CSS*

ngmf.ronbodnar.com

- Architected an open-source Angular library providing reusable form abstractions, typed components, validation, and Angular Material integrations that significantly reduce enterprise application boilerplate

Showcase OS – *TypeScript, React, Zustand, Tailwind CSS*

ronbodnar.com

- Engineered a browser-based OS simulation in React/TypeScript featuring full window management, process lifecycle tracking, and responsive desktop/mobile environments

Grid of Words – *JavaScript, Node.js, Express.js, MongoDB, Docker*

play.ronbodnar.com

- Developed a Wordle-inspired puzzle game using vanilla JavaScript with custom game logic, efficient DOM updates, and animated keyboard/tile interactions

Transportation Management System – *JavaScript, MySQL, PHP, Chart.js*

tms.ronbodnar.com

- Created an operational transportation dashboard using PHP, MySQL, and Chart.js to replace manual shipment tracking with centralized KPI visibility

EDUCATION

Western Governors University | *Bachelor of Science, Computer Science*

Jan 2024
